Art Unit: 1765

Claim 6 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 6 is a multi dependent claim, which depends on another multi dependent claim 4.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 and 4 to 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Von Ammon et al. (6,153,008) in view of Ferry (6,197,111).

The Von Ammon et al reference teaches a seed pulling apparatus, note, and entire reference. The apparatus consists of a chamber with a crucible. There is a means to heat the crucible so as to create a melt. There is a means to pull an ingot

Art Unit: 1765

from the melt. There is a heat shield that surrounds the ingot in the chamber. The heat shield is a tube shape and extends down towards the melt. At the end above the melt, there is an inward ring and then an upward ring. Note figure 1 and 2 and col. 2 and 3. The difference between the instant claims and the prior art is the material of construction and an insulating material in the heat shield. However, the Ferry et al reference teaches a seed pulling apparatus with a heat shield. At the bottom of the shield there is addition insulating material which is covered, claims 4 to 6, note figure 5. The shield is graphite coated with silicon carbide, note col. 3. It would have been obvious to one of ordinary skill in the art to modify the Von Ammon et al apparatus by the teachings of the Ferry reference to use an insulating member in order to decrease fluctuations in the temperatures around the ingot and melt.

Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Von Ammon et al. (6,153,008) in view of Ferry (6,197,111).

The Von Ammon et al and Ferry references are relied on for the same reasons as stated, supra, and differ from the claims in the curvatures. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable curvatures in the Von Ammon et al reference in order to lessen turbulent flow of the inert gases caused by rough edges.

Art Unit: 1765

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert M Kunemund whose telephone number is 571-272-1464. The examiner can normally be reached on 8 hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nadine Norton can be reached on 571-272-1465. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
